

# RADIVA

## SHOCKWAVE

### Description:

R A D I V A is a solid-state, electronically controlled Radial Pressure Wave Therapy (RPWT) system designed for consistent and reliable musculoskeletal treatment.

The system offers a wide energy range from 10 to 185 mJ, allowing precise dose adjustment across acute and chronic indications.

Treatment frequency is adjustable from 1 to 22 Hz in 1 Hz increments, enabling fine control over therapy intensity and patient comfort. Multiple operating modes—including Continuous, Burst, Intermittent, and Progressive—provide flexibility to tailor protocols for different clinical applications.

The robust hand piece is engineered for durability and is rated to deliver a minimum of 4,000,000 shocks, ensuring long service life and stable performance.

R A D I V A is supplied with 6 mm, 15 mm, and 25 mm applicator heads to address superficial and deep tissue conditions. The system is designed for predictable output, low maintenance, and long-term clinical reliability.
